

NEW!

WP Sign Systems has implemented new, shorter standard lead times for stock and custom orders!

You can get all our stock products in **10 working days or less,*** while custom jobs can be turned around anywhere from **1-20 working days,*** depending on the scope of the project. Fully customized channel insert kits involving custom lists, fonts, colors, and branding (see example page 2) may still take up to 30 working days.

Please note that lead time begins after quote and art are approved and a PO is issued.

*Orders requested to be shipped sooner than standard lead times **may** be subject to a rush fee.

WP Goes Even Greener

If you use one of our reusable sign kits, kudos! Reusable sign systems dramatically reduce consumption of paper, toner, and laminate, while looking great and saving you money on [materials and labor costs](#).

At WP we've always recycled 100% of our unused vinyl stock locally. 98% of our non-product plastic used for our in-house extruding gets recycled on-site, and we use 95% UV ink which significantly reduces the use of toxic solvents in the printing and cleanup process.

Now we want to help our customers recycle locally too: When it's time to update your system, we can help you avoid throwing the old one in the trash or having to package and ship it for recycling. That is why we'll contact waste recycling companies in your area who will pick up your old sign system and recycle it locally at no charge to you when you purchase a new sign system from WP.

Custom Lead Time Examples

WP works hard to help our customers meet their deadlines. Your sales rep can estimate lead times to help you plan ahead effectively for any of your upcoming projects.
